

**360° SERVICES  
FOR CUSTOMISED  
PLASTIC PROFILES.**

# INNOVATIVE PLASTIC PROFILE SOLUTIONS

We produce profiles and seals with individual added value. During development and production, you benefit from decades of expertise and our uncompromising customer focus.

# 360° EXPERTISE AND SERVICES FOR YOUR PLASTIC PROFILES

## Identifying hidden potential

- Opportunities to reduce costs
- Simplification of work processes with profiles and seals
- Quality optimisation through material replacement

## Designing the best customised solutions

- Passion for profiles and seals with added value
- Intensive analysis of detailed requirements
- Prototype testing and continuous development

## Focus on long-term use

- Highly robust products
- Dimensional accuracy in production
- Consideration of ecological aspects

## Demand-driven services

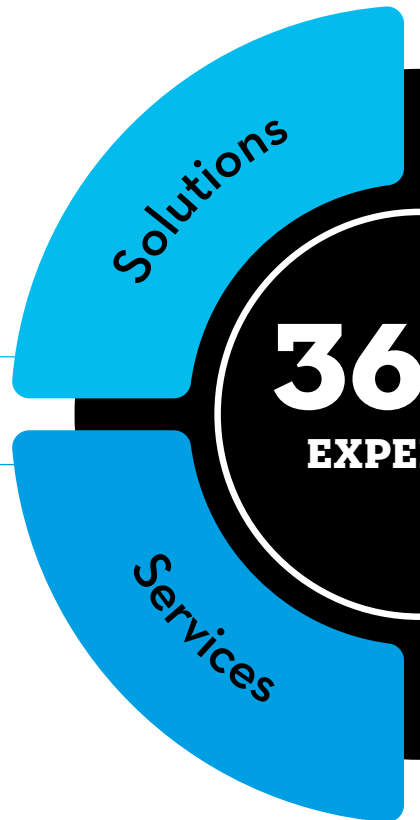

- Development and optimisation of profiles
- Production and post-processing
- Customised packaging and just-in-time logistics

## Experienced service teams

- Employees with years of experience
- Reliable cooperation based on partnership
- Continuous availability

## On site for you around the world

- Services for customers around the world
- Rapid response
- Dedicated contact partners in different languages

We support you through all process phases, from the development of new profiles and production to post-processing, packaging and service. We support you throughout the life cycle. In every area, you benefit from the expertise that we have built and continuously refined over the years.

**Cross-industry experience**

- Expertise through projects for customers from various industries
- Ongoing analysis of market requirements
- High level of material expertise

**Strong innovative resourcefulness**

- Cooperation with research institutes
- Use of innovative materials
- Continuous development of existing solutions

**High demands on own products**

- Safety-relevant aspects
- Economic efficiency at all levels
- Long-lasting orientation

**In-house tool development**

- Highly precise tools
- Rapid design and customisation
- Simplified prototype development

**State-of-the-art production lines**

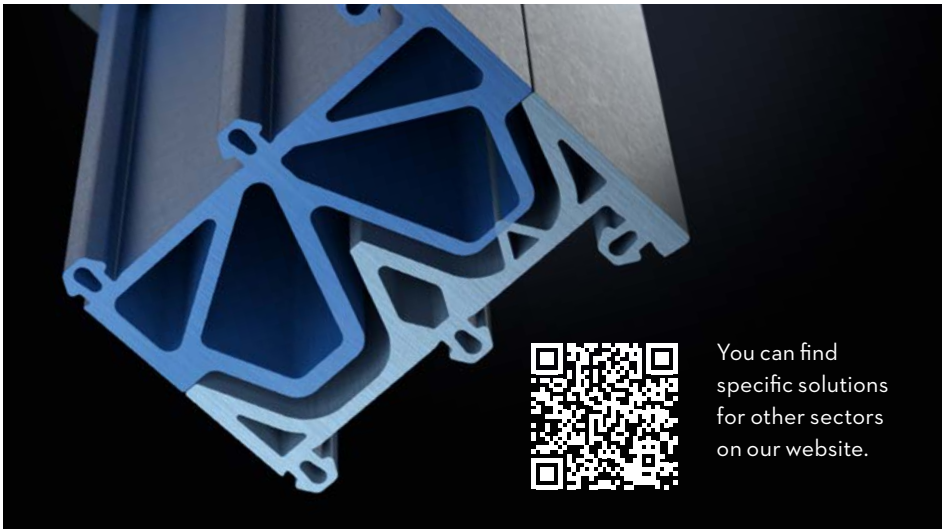

- Swiss quality production
- Flexible machines for different materials
- Prompt realisation, even of large orders

**Automated production and control processes**

- Permanent monitoring of production parameters
- Consistently high quality for follow-up orders
- Certificate ISO 9001:2015

# PROFILES WITH ADDED VALUE FOR SELECTED INDUSTRIES

The versatility of the materials and the wide range of optimisation options in terms of fire protection, impermeability, flexibility, etc. are constantly opening up new application areas. Discover our diverse industry solutions. We will advise you individually.

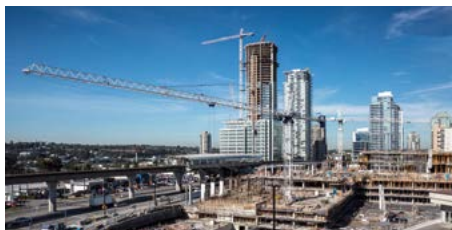

You can find  
specific solutions  
for other sectors  
on our website.

### **Profiles for shading systems**

Weather and sun protection systems control the incidence of sunlight and effectively protect against unwanted views, wind and rain. Although plastic profiles in shading systems are often invisible, they fulfil many important functions. Inexpensive, robust and individually customised, they optimise curtain systems as well as awnings and blinds.

### **Profiles for the building industry**

Building projects are becoming increasingly complex.

In addition to functionality, plastic components must also fulfil ecological and safety standards. We offer efficient and innovative sealing and damping profiles for a wide range of applications in the construction industry. Our robust profiles impress with their individually optimised properties.

### **Profiles for door and gate systems**

In addition to their excellent sealing properties, our door and gate profiles also protect against environmental impact or the spread of fire. Their good cost-benefit ratio and their focus on simple installation are further reasons for the popularity of our versatile door and gate profiles.

### **Profiles for the household and appliances**

Domestic appliances are very popular due to their durability, high-quality workmanship and innovative features. Considering the growing importance of energy efficiency, plastic is also becoming increasingly relevant. Our profiles are perfect for kitchen appliances, but also fulfil several other practical functions in the home.

You can find  
more products  
and solutions on  
our website.

# CUSTOMISED PROFILE PROPERTIES

The objective determines the production of the profiles. Are conductive or flame-retardant properties required? Or thermal insulation or sliding properties? Regardless of which properties you require for your profiles, we will optimise them based on your specifications.

**Coextruded profiles**

**Profiles with excellent slide properties**

**Fire protection profiles**

**Sealing profiles**

**Reworked profiles**

# YOUR CONTACT PARTNERS

We will gladly support you with all questions relating to plastic profiles, including their diverse application areas and creative implementation concepts.
